Backend-leaning full-stack developer, 3 years of commercial Laravel and Vue 3. I build systems where a mistake costs money: customs, encrypted government APIs, ERP and warehouse integrations. At PSP Express I owned ProCargo (~70% of 1,000+ commits) and led the ICS customs portal with ~1M shipments.

~10x faster background jobs, 5-10 s to 0.5-1 s	**15 s to 1 s** KPI dashboard load time	**7** systems integrated: ERP, WMS, customs	**10M+** users of NotAI, a Telegram Mini App

EXPERIENCE

PSP Express — Full-Stack Developer

Jul 2025 - Aug 2026 · company closed

Logistics and customs clearance. Owner of ProCargo (Laravel 10, Inertia, Vue 3, TypeScript), taken over as legacy. ICS multi-tenant customs portal (Laravel 12, Filament) since Aug 2025, lead developer since Jun 2026.

- Cut background job time from **5-10 s to 0.5-1 s**: found jobs lost by dispatchAfterResponse under PHP-FPM, 192+ serialized jobs in one chain and a cache-lock deadlock.
- Moved qualified e-signing into the browser (IIT EndUser in a Web Worker), so the **private key never leaves the client**. Ran in production.
- Made shipment creation safe over a non-idempotent customs API with Redis locks, per-job retries and lockForUpdate: **no duplicate track numbers**.
- Integrated **7 systems**, including Odoo ERP, WMS, an encrypted SOAP customs API (AES-256, RSA) and Cashalot fiscal service, with feature-flagged rollback.
- KPI dashboard from **15 s to 1 s** by replacing N+1 queries with GROUP BY aggregates. Register pipeline on Bus::chain and Bus::batch with rollback.
- Rebuilt the ProCargo frontend on Vue 3 + TypeScript through two full redesigns; added multi-tenancy in a month, with **6 roles and ~30 permissions** in RBAC.

Prof-IT — Full-Stack Developer, outsourcing

Jan 2023 - Apr 2025

Came in for one freelance order. The CTO liked the result and hired me full-time.

- Built the game part of **NotAI**, a client Telegram Mini App with **10M+ registered users**: Unity WebGL game, TypeScript Telegram integration, Laravel backend.
- Prototype in a week, **release in 2 months** with a PM and two QA.
- Internal CRM and ERP on Laravel, Vue 3, PostgreSQL, Docker; cut a heavy report from **2.5 s to 1 s**.

SunLab Games — Co-founder, Unity Developer, part-time

Mar 2022 - Oct 2023

Side project: released Country Balls: Orc Destroyer on Android, ~5,000 installs with no paid marketing (Unity, C#).

SKILLS

BACKEND	PHP 8, Laravel 10-13, Eloquent, queues (Bus::chain, Bus::batch), Sanctum, Filament, Saloon, RabbitMQ
FRONTEND	Vue.js / Vue 3 (Composition API), TypeScript, Inertia.js, Tailwind CSS, Vite, React, Next.js
DATA	MySQL, PostgreSQL, Redis (cache, locks, queues), query optimisation
INTEGRATIONS	REST, SOAP, webhooks, AES/RSA payload encryption, qualified e-signatures
ARCHITECTURE	idempotency, distributed and pessimistic locking, state machines, multi-tenancy, RBAC
DEVOPS, TESTING	Docker, CI/CD (GitHub Actions), Linux, Nginx, AWS S3, PHPUnit, Vitest, Postman
AI	Claude Code / AI-assisted development daily, with role-based subagents for plan, implement, test and review. I merge only diffs I understand.

PROJECTS · PUBLIC, CI ON GITHUB ACTIONS

laravel-telegram-helpdesk · Telegram support desk built for PSP Express, published with permission. Laravel 12, Nutgram, REST API.
github.com/CaptainAlexxxx/laravel-telegram-helpdesk

laravel-ephemeral-files · Files that expire after 24 h. Laravel 13, RabbitMQ, transactional outbox, race test in CI.
github.com/CaptainAlexxxx/laravel-ephemeral-files

n5deal-marketplace-prototype · Marketplace with three roles and faceted search. Next.js 15, TypeScript, Prisma.
github.com/CaptainAlexxxx/n5deal-marketplace-prototype

EDUCATION AND MORE

EDUCATION	BSc, Automation and Computer-Integrated Technologies, Igor Sikorsky Kyiv Polytechnic Institute, 2024
LANGUAGES	English B2, Ukrainian native
REFERENCES	Oleksandr Valikov, Head of Engineering, and Serhii Arevshatyants, CTO, both PSP Express. On request.
