Backend-leaning full-stack developer, 3 years of commercial Laravel and Vue 3. I build systems where a mistake costs money: customs declarations, encrypted government APIs, ERP and warehouse integrations. At PSP Express I was the main developer of ProCargo (~70% of 1,000+ commits) and, from June 2026, lead developer of the ICS customs portal with ~1M shipments, in a two-person team with the Head of Engineering.

10x	**15 s to 1 s**	**7 systems**	**10M+**
faster background jobs, 5-10 s to 0.5-1 s	KPI dashboard load time	integrated: ERP, WMS, customs, fiscal	registered users, NotAI

EXPERIENCE

PSP Express

Jul 2025 - Aug 2026 · company closed

Full-Stack Developer · Lead Developer on ICS from Jun 2026

Logistics and customs clearance. ProCargo, customs declarations and shipment tracking (Laravel 10, Inertia, Vue 3, TypeScript), taken over as legacy. ICS, a multi-tenant customs portal (Laravel 12, Filament, Vue 3), from Aug 2025.

- Background jobs **10x faster**, 5-10 s to 0.5-1 s per job: dropped dispatchAfterResponse that lost jobs under PHP-FPM, passed IDs instead of 192+ serialized jobs, fixed a cache-lock deadlock.
- **Private key never leaves the client**: moved qualified e-signing into the browser (IIT EndUser in a Web Worker) with an idempotent, rate-limited send queue. Ran in production.
- **No duplicate track numbers** over a non-idempotent customs API: Redis locks with TTLs tuned to API timeouts, per-job retry policies, lockForUpdate across parallel workers.
- **Safe restart after partial failure** in the register pipeline across customs, ERP and WMS, built on Bus::chain and Bus::batch as a state machine with rollback.
- **7 systems integrated**: Odoo ERP, OMS/WMS, encrypted SOAP customs API (AES-256-CBC, RSA, qualified e-signatures), Cashalot fiscal service, incident service. Feature-flagged rollback.
- KPI dashboard from **15 s to 1 s** with GROUP BY aggregates instead of N+1 queries, batches of 500 under the MySQL placeholder limit and lazy-loaded details.
- **Zero downtime** while replacing two legacy PDF helpers (900+ and 870+ lines) with one service, in a 15-step migration covered by PHPUnit feature tests.
- **Security hardening**: fail-closed webhooks, hash_equals, an IP allowlist that ignores X-Forwarded-For, 2FA attempt limits, hashed reset tokens.
- ProCargo frontend rebuilt on Vue 3 and TypeScript: component library, light and dark themes, **two full redesigns**.
- Multi-tenancy on a legacy codebase **in a month**: per-tenant branding, RBAC with 6 roles and ~30 permissions.
- incident-core, a new service from scratch (TypeScript frontend, Laravel backend), **first version in 2 weeks**.

EXPERIENCE, CONTINUED

Prof-IT

Jan 2023 - Apr 2025

Full-Stack Developer

Outsourcing company. Joined for one freelance order, then hired full-time by the CTO.

- Built **NotAI** end to end as a freelance order: Unity WebGL game, TypeScript Telegram integration and the Laravel backend, for a client Telegram Mini App with **10M+ registered users**.
- Prototype **in a week**, release **in 2 months** with a PM and two QA. The CTO then hired me full-time to go deeper into PHP and Laravel.
- Internal CRM and ERP on Laravel, Vue 3, PostgreSQL and Docker; cut a heavy report from **2.5 s to 1 s**.

SunLab Games

Mar 2022 - Oct 2023

Unity Developer, indie side project, part-time

Two-person indie studio I co-founded. Released Country Balls: Orc Destroyer on Android, ~5,000 installs with no paid marketing (Unity, C#).

SKILLS

BACKEND	**PHP 8**, **Laravel 10-13**, queues (Bus::chain, Bus::batch), Sanctum, Filament, Saloon, RabbitMQ
FRONTEND	**Vue 3** (Composition API), **TypeScript**, Inertia.js, Tailwind CSS, Vite, React, Next.js
DATA	**MySQL**, **PostgreSQL**, **Redis** (cache, locks, queues), query optimisation
INTEGRATIONS	**REST**, **SOAP**, webhooks, AES/RSA payload encryption, qualified e-signatures
ARCHITECTURE	idempotency, distributed and pessimistic locking, state machines, multi-tenancy, RBAC
DEVOPS, TESTS	**Docker**, **Git**, CI/CD (GitHub Actions), Linux, Nginx, AWS S3, **PHPUnit**, Vitest, Postman
AI	Daily Claude Code workflow with role-based subagents (plan, implement, test, review); I review every diff myself.

OPEN-SOURCE PROJECTS

laravel-telegram-helpdesk · Support desk bot for PSP Express, published with permission. Laravel 12, Nutgram.
github.com/CaptainAlexxxx/laravel-telegram-helpdesk

laravel-ephemeral-files · Files that expire after 24 h. Laravel 13, RabbitMQ, transactional outbox, race test in CI.
github.com/CaptainAlexxxx/laravel-ephemeral-files

n5deal-marketplace-prototype · Marketplace with three roles and faceted search. Next.js 15, TypeScript, Prisma.
